

Software Requirements Specification (SRS) & Economic Analysis

Weather Web Application Project Report

Version: 1.0

Prepared By: Amal Zahra

1. Introduction

The Weather Web Application allows users to enter a city name and retrieve real-time weather information including temperature and weather condition using a third-party API.

2. System Features

- User enters city name.
- System sends request to Weather API.
- System displays temperature in Celsius.
- System displays weather condition.
- Error handling for invalid city or network failure.

3. Non-Functional Requirements

- System response time less than 3 seconds.
- User-friendly interface.
- Secure API usage.
- Cross-browser compatibility.

4. Economic Analysis

Development Cost (Estimated)

Item	Estimated Cost (PKR)
Development & UI Design	60,000
Testing & Documentation	25,000
Domain & Hosting (1 Year)	19,000
Total Estimated Cost	104,000

Revenue Estimation

Source	Monthly Revenue (PKR)
Google Ads	15,000
Premium Users	40,000
Affiliate Marketing	10,000
Total Monthly Revenue	65,000

ROI Calculation

Annual Revenue = 780,000 PKR Annual Cost = 80,000 PKR Net Profit = 700,000 PKR ROI $\approx$ 673%
Break-Even Point $\approx$ 2 Months
